

UKHACC COMMITMENTS

Reporting on members' progress

This report was written by Dr Amelia Cussans and Dr Eleanor Cooke. The data was collected as part of the Climate and Health Scorecard Initiative and is accurate to 31st December 2023.

Report published: 21/03/2024

CLIMATE & HEALTH SCORECARD INITIATIVE

AIMS

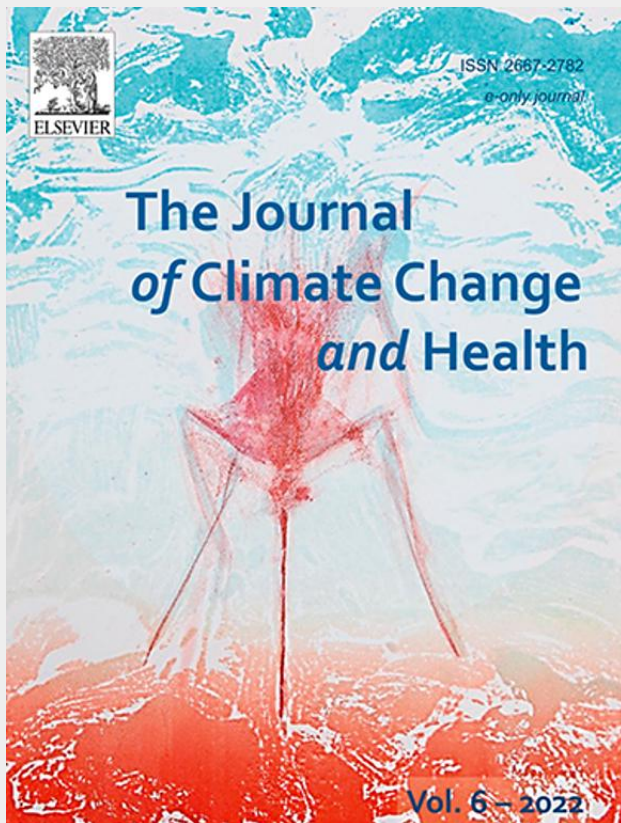

- To support health organisations in climate action
- Enable health professionals to know what climate action has been taken by their organisations

STRATEGY

- Survey health organisations using a questionnaire of achievable yet ambitious climate actions
- Share findings

PILOT: published Aug 2022

ABSTRACT

Introduction: Climate change is a health emergency. Health organizations have a responsibility to engage with this crisis via advocacy, education, research, divestment and by rapidly reducing their carbon emissions. This report aims to establish what progress has been made by UK health organizations and identify areas requiring further action.

Methodology: A cross-sectional survey examined four domains: internal operations; education and training; divestment; and advocacy. Scores were presented according to rank in scorecard format.

Results: 28 UK health organizations were asked to participate, with a 30% response rate. Total scores ranged from 13 to 41.75 out of 64 points. The Royal College of Paediatrics and Child Health achieved the highest score (41.75) followed by the Royal College of Psychiatrists (39.5) and the Royal College of General Practitioners (28.5).

Discussion: Health organizations are well-placed to: educate their members on the health impacts of climate change; advocate for legal and political change; lead by example by enacting their own decarbonization plans and minimizing their carbon emissions; and by divesting financially from fossil fuels. Organizations showed varying levels of action, with many not participating or scoring poorly. However, there was evidence of some excellent work and growing levels of engagement.

Conclusion: This report identifies positive climate action alongside opportunities for growth among UK health organizations. Although considerable advances are being made, these are not to the scale or speed required to secure a livable future for all. We hope that this work will support organizations in taking further action.

1. Introduction

The climate crisis is the greatest health threat of the 21st century [1,2]. The burning of fossil fuels has led to a global temperature rise of 1.1°C since 1850 [3], with far reaching physical and mental health consequences. Extreme weather and drought lead to crop failure, malnutrition, forced displacement of people and physical and mental trauma, while air pollution increases morbidity and mortality including from heart disease, asthma and dementia [1,2]. Societal actions in the next decade will determine the extent to which we can limit temperature rises and their resultant health impacts. Progress has been made, but not to the scale nor speed required [4]. Research is needed on climate change health impacts and solutions; planetary health should be integrated into our education and training [5]; and our health organizations should lead by example by enacting green plans to reduce their carbon emissions and waste production; by divesting financially from fossil fuels [6] and by advocating climate-friendly policy and legislation.

Furthermore, as healthcare itself is responsible for significant carbon emissions and waste production [7], we must decarbonize and streamline health services so that they are sustainable for future generations.

**Declare that
the climate
emergency
is a health
emergency**

Declare that the climate emergency is a health emergency

How the scorecard assessed this commitment:

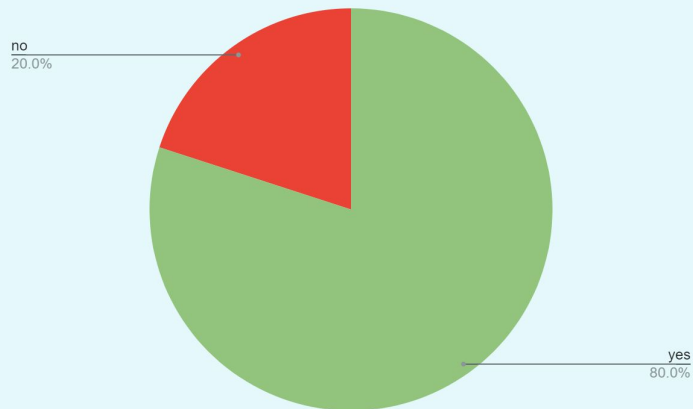

Q47. Has your organisation publicly declared a climate and ecological emergency? *1 point*

Declaration made	Green
Declaration not made	Red

Declare that the climate emergency is a health emergency

This commitment was met by 12/15 (80%)

Whilst three organisations had not made a formal declaration, it is noted that they had all acknowledged the climate emergency through their advocacy work, and/or had referenced the climate emergency on social media.

Organisation	Declaration Status
Association of Clinical Psychologists	Yes
British Association for Critical Care Nursing	Yes
British Society of Gastroenterology	Yes
College of Paramedics	No

treaty**

Disinvest from fossil fuels

How the scorecard assessed this commitment:

39. Divestment: Has your organisation publicly divested all direct investments in fossil fuels? *3 points*

40. Divestment: Has your organisation divested all indirect investments in fossil fuels? *3 points*

41. Divestment of pension funds? *4 points*

42. Does your endowment have investments in climate solutions that consider local communities and align with climate justice goals? *1 point*

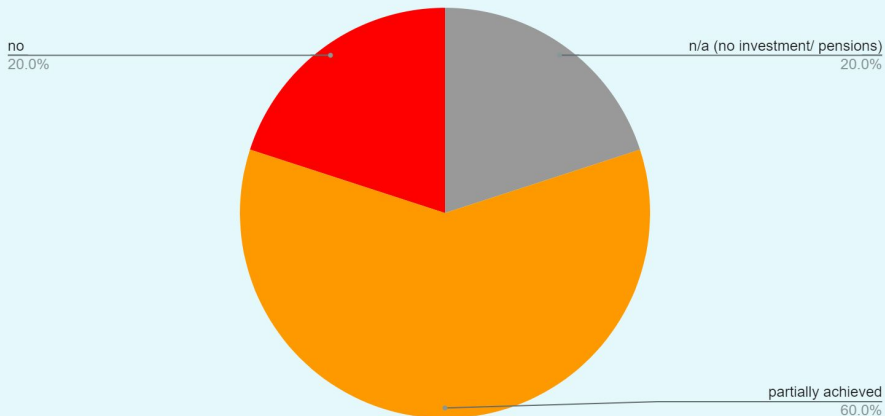

43. Transparency: has your organisation published a full list of endowment holdings (including in sub funds) which is available to the public? *1 point*

44. Transparency: has your organisation published a full list of pension holdings (including in sub funds) which is available to the public? *1 point*

Total points for this commitment: 13

≥	9
	5-8
≤	4

Disinvest from fossil fuels

The divestment aspect of this commitment was not fully met by any of the participating members. We note that many organisations had divested their investments both directly and indirectly, but had not directed their pensions, nor scored points for financial transparency or positive reinvestment in climate solutions, contributing to overall low scores in this area.
